The BEST calculator – User manual

If you need to calculate an operation which requires 2 operands do the following. First enter the first operand (number) then click the operation you want to calculate then enter your second operand. Now you only need to click the = button.

If you need to calculate an operation which requires just one operand just enter it and then click the operation. In this case there is no need to click the = button.

Button	First op.	Second op.	Description
X!	x		Factorial of the number.
Xⁿ	x	n	Provides the n-th power of the number.
X²	x		Provides the power of 2 of the number.
ⁿ√x	n	x	Provides n-th root of the number.
²√x	x		Provides square root of the number.
log_ax	a	x	Provides the logarithm of the number with the given base.
ln x	x		Provides the natural logarithm of the number.
rand	from	to	Random number.
e			Provides the e number.
π			Provides the pi number.
/,*,+,-			These are the basic mathematic operations.
CE			Deletes just the value on the display.
C			Deletes all the calculations in the memory.
+/-	number		Changes the sign of the value.

If you manage to forget what eg. “rand” does, you can always click on the “?” button in the upper-right corner corner.
